ARIZONA WATER BANKING AUTHORITY

INTRODUCTION

The Arizona Water Banking Authority (AWBA) was created in 1996 to complement the management efforts of Colorado River water in Arizona (Laws 1996, Chapter 308). Prior to the creation of the AWBA, Arizona was underutilizing its full 2.8 million acre-foot (af)\(^1\) share of water from the Colorado River. Therefore, as part of its original statutory purpose, the AWBA is required to coordinate and confer with the other entities to bank, or store, the unused portion of Colorado River water to meet its contractual and statutory obligations.

The AWBA stores Central Arizona Project (CAP) water to protect Arizona municipal and industrial (M&I) water users against future water shortages on the Colorado River and against disruptions in canal operations. The AWBA, through its Commission, is required to firm water supplies for those users and purposes. To achieve this, the AWBA annually pays the delivery and storage costs to bring water into the Central Arizona Water Conservation District’s (CAWCD)\(^2\) three county service area (Maricopa, Pinal and Pima). The water is stored in underground aquifers using underground storage facilities or is used by irrigation districts in lieu of pumping groundwater through groundwater savings facilities. Regardless of the storage method, long-term storage credits (LTSC) accrue and are held in accounts administered by the Arizona Department of Water Resources (ADWR). To date, the AWBA has banked approximately 3.4 million af of LTSC; 2.5 million af to provide back-up supplies during shortages to certain Arizona cities and Indian communities and over 830,000 af of credits for groundwater management benefits.

The AWBA is governed by a five-member Commission comprised of the following: a) three members appointed by the Governor based upon specified statutory criteria; b) the president of

---

\(^1\) Water volume is measured in acre-feet. An acre-foot is approximately 325,851 gallons; the volume covering one acre of land to the depth of one foot. An acre-foot can supply the household needs of two, four-person families for one year.

\(^2\) The CAWCD is a tax-levying public improvement district of the state that manages and operates the Central Arizona Project canal.
the CAWCD or their designee; and c) the ADWR Director, who serves as chairman. The President of the Senate and Speaker of the House of Representatives, or their respective designees, also serve on the Commission as nonvoting, ex-officio members (A.R.S. § 45-2421).

The AWBA is required to: 1) publish an annual report by July 1 of each year of its previous year’s transactions and proceedings; 2) publish a Plan of Operation by January 1 of each year that governs its operations over the course of that calendar year; and 3) prepare a Ten-Year Plan that details projected water banking activities.

AWBA FUNDING

The ADWR Director is authorized to levy an annual groundwater pumping fee in the Phoenix, Pinal and Tucson Active Management Areas (AMAs) for intrastate water banking purposes. The monies must be used to benefit the AMA in which they were collected, and thus must be deposited into the respective county subaccounts of the Water Banking Fund (A.R.S. § 45-613).

In addition to withdrawal fees, the AWBA may receive monies derived from an ad valorem property tax collected by the CAWCD in its three county service areas (A.R.S. § 48-3715.03). The CAWCD is authorized to levy up to a maximum of $0.04 per $100 of assessed valuation through December 31, 2024, and beginning January 1, 2025, up to $0.03 per $100 of assessed valuation through December 31, 2029 (Laws 2015, Chapter 224). The CAWCD is required to annually determine by resolution the amount of tax to be levied. However, monies have not been deposited into the respective county subaccounts since 2003 due to legislative sweeps and, instead, the CAWCD has used the levy to offset the cost of AWBA water deliveries in the tri-county CAWCD service area.

The AWBA may also receive state General Fund appropriations as part of its funding sources at the discretion of the Legislature.

RELATIONSHIP WITH ADWR AND CAWCD

Although ADWR is required to provide administrative, technical and legal support to the AWBA, the AWBA is a state agency unto itself and, accordingly, its finances and operations are separate and distinct from those of ADWR. An administrative subaccount to the Water Banking Fund, funded by interest earnings, is used to reimburse ADWR for these positions and other administrative services provided.

Additionally, the AWBA coordinates with CAWCD for technical support needs, as well as the purchase, delivery and storage of Colorado River water delivered through the canal. Like ADWR, CAWCD is reimbursed for those services requested by the AWBA.

ACCESS TO EXCESS CAP WATER

The AWBA traditionally has purchased CAP water when excess supplies are available. Excess CAP supplies may exist once CAWCD has fulfilled water demand obligations for its higher priority users. The U.S. Secretary of the Interior’s 1983 Record of Decision (Decision) outlined a priority system for the allocation of CAP water based on the following four classes of water: 1) M&I; 2) Indian; 3) non-Indian agriculture (NIA); and 4) miscellaneous. The Decision specified that in times of shortage, miscellaneous uses would be eliminated first, followed by NIA uses. Excess CAP water is the most junior priority within the CAP water priority hierarchy and, as such, it will be the first supply to be reduced if a shortage is declared on the Colorado River.

The CAWCD has water contracts with municipal users, irrigation districts, Indian tribes, and private water companies to name a few, and

---

3 The Arizona Groundwater Code designates five Active Management Areas (Phoenix, Prescott, Pinal, Santa Cruz, and Tucson) where there is a heavy reliance on mined groundwater. Each AMA has management requirements relating to the pumping and use of groundwater, including a series of increased water conservation phases over the course of specified time periods. (See A.R.S. § 45-611).
those contractors and subcontractors have a higher priority to receive CAP water than the AWBA.

In 2010, the Legislature clarified AWBA’s participation in two potential pools of excess water made available by the CAWCD for intrastate and interstate water banking purposes (Laws 2010, Chapter 168). The legislation specified that the first pool made available by CAWCD would be used to meet AWBA’s intrastate water obligations. This does not change AWBA’s existing authority to store CAP water for interstate banking purposes. Additionally, the second pool would be created from the acquisition of new CAP water using AWBA interstate funds (A.R.S. § 45-2427).

INDIAN FIRMING

In 2004, President Bush signed the Arizona Water Settlements Act (Settlements Act) which resolved several Indian water rights claims in the State. The Legislature subsequently enacted a series of bills from 2005 through 2007 to implement the Settlements Act and further defined Arizona’s rights and obligations under federal law (Laws 2005, Chapter 143; Laws 2006, Chapter 114; Laws 2007, Chapter 249; Laws 2007, Chapter 286). The AWBA, in cooperation with ADWR and CAWCD, is the State’s agent for meeting Indian firming obligations.

The Settlements Act recognizes three categories where the State has firming responsibilities. The first two obligations pertain to firming of NIA Priority CAP water for the Gila River Indian Community and other Arizona tribes in times of shortage for a 100-year period and the third pertains to providing assistance to the Secretary of the Interior in carrying out obligations of the Southern Arizona Water Rights Settlement Act (completed in 2012).

In addition, because there are outstanding water rights claims and ongoing negotiations with other Arizona tribes, the AWBA could incur additional future firming responsibilities beyond those identified in the Settlements Act.

The AWBA is authorized to use General Fund appropriations and withdrawal fees to satisfy the State’s firming commitment (Laws 2006, Chapter 114). Although there is currently no dedicated funding source for Indian firming, the Legislature permitted the AWBA to purchase LTSC, including for the purpose of Indian firming, if excess CAP water has been stored or is otherwise unavailable (Laws 2014, Chapter 126).

INTERSTATE BANKING AGREEMENT WITH NEVADA

The AWBA is authorized to enter into interstate water banking agreements with California and Nevada to assist those states in meeting future water needs (A.R.S. § 45-2471 et seq.). The AWBA, on behalf of the State, cannot enter into an interstate banking agreement without the consent of the ADWR Director and at least two Commissioners who have voting authority.

Arizona entered into an interstate water storage agreement with Nevada in 2001 and began storing water in 2005. The parties include the AWBA, the Southern Nevada Water Authority (SNWA) and the Colorado River Commission of Nevada.

Although the agreement has been amended several times, the current iteration states that storage for interstate purposes will be determined by the parties on an annual basis and may include the storage of Nevada’s unused apportionment. Storage will be paid for by Nevada on a pay-as-you-go basis.
